New isolated peptide, useful as affinity purification tag for recombinant protein, comprises at least two high-affinity streptavidin-binding modules.

Disclosure; Page 4; 18pp; German.

The invention relates to an isolated peptide (I) comprising at least two individual modules separated by 0-50 amino acids, with each containing at least one motif His-Pro-X where X = Gln, Asn or Met. (I), which contain streptavidin binding modules, are useful as affinity handles for purification of recombinant fusion proteins (PP), also for detecting FP, e.g. on protein chips or microtitre plates. The modules in (I) bind strongly to streptavidin, with a co-operative effect that provides stronger binding than a single tag, but are displaced by a competitor. (I) does not interfere with the function of attached proteins (II) (so it may not be essential to remove it); facilitates detection and has easily

                                                                                                      The invention relates to an isolated peptide (I) comprising at least two individual modules separated by 0-50 amino acids, with each containing at least one motif His-Pro-X where X = Gln, Asn or Met. (I), which contain streptavidin binding modules, are useful as affinity handles for purification of recombinant fusion protein as [PP], also for detecting FP, e.g. on protein chips or microtitre plates. The modules in (I) bind strongly to streptavidin, with a co-operative effect that provides stronger binding than a single tag, but are displaced by a competitor. (I) does not interfere with the function of attached proteins (II) (so it may not be essential to remove it); facilitates detection and has easily controllable binding properties. (I) is particularly used for purifying FP from dilute solution in batch formats (which use simpler apparatus than column methods and result in lower loss of FP). The present sequence is that of a streptavidin binding peptide disclosed with the invention
                                                                                                                                                                                                                                                                                                                                                 protein, modules.

contaminated any once of the first industrial for the heavy metal ions contaminated appears in the formation is useful for recombinantly comprising a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing comprision in the cell and culturing comprision for the produce a recombinant host cell and culturing comprision for the produce a recombinant host cell and culturing comprision for the cell and culturing divisions are contaminated soil, ground water, hydroponic solutions or irrigation composed to support, is useful for concentrating heavy metal ions from contaminated active in the first concentrating heavy metal ions from contaminated active including biological fluids. The nucleic acid, when recombinantly contaminated active in the invivo sequestration and elimination of contaminate for use in the invivo sequestration and elimination of contaxitable for use in the invivo sequestration and elimination of the invention are also useful in water treatment resins. The molecules of the contaxitable for useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as contaxitable for the invention such as collection (Auty7553-Auty7560) of synthetic contamination of the heavy metal binding proteins of the invention. This sequence is one of the heavy metal binding proteins termed chelons of the invention.

                                                                                          The present invention relates to a new non-naturally occurring CC recombinant DNA molecule comprising a sequence encoding a chelon protein CC which binds mercuric ions. The invention is useful for recombinantly CC producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector CC comprising a protein to produce a recombinant host cell and culturing CC region for the protein to produce a recombinant host cell and culturing CC mucleic acid encoding the chelon protein is useful for binding divalent CC mucleic acid encoding the chelon protein is useful for binding divalent CC mercuric ions, to take up, sequester and concentrate the heavy metal ions CC from contaminated soil, ground water, hydroponic solutions or irrigation CC water of waste streams. The DNA of the invention, when immobilised onto a solid support, is useful for concentrating heavy metal ions from CC contaminated environment waste streams or contaminated aqueous medium CC including biological fluids. The nucleic acid, when recombinantly capressed in enteric bacteria (which are nontoxigenic and nonpathogenic), is suitable for use in the in vivo sequestration and elimination of CC coxic mercuric ion from gastrointestinal tracts of animals or humans exposed to coxic metal ions such as mercury and/or cadmium. The molecules of the coxic mercury or cadmium with high affinity. The present amino acid sequence cadmium/mercury ion binding chelon proteins of the invention. This sequence is one of the heavy metal binding proteins for the invention. This is requested to invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 á

CC which binds mercuric lons. The invention is useful for recombinantly
CC which binds mercuric lons. The invention is useful for recombinantly
CC producing a protein in a host-cell, by infecting or transforming a host
CC cell capable of expressing a chelon coding sequence with a vector
CC comprising a promoter active in the host cell operably linked to a coding
CC the recombinant host cell under conditions, where DNA is expressed. The
CC nucleic acidjencoding the chelon protein is useful for binding divalent
CC mercuric ions, to take up, sequester and concentrate the heavy metal ions
CC from contaminated soil, ground water, hydroponic solutions or irrigation
CC water of waste streams. The DNA of the invention, when immobilised onto a
CC solid support, is useful for concentrating heavy metal ions from
CC contaminated environment waste streams or contaminated aqueous medium
CC contaminated environment waste streams or contaminated aqueous medium
CC is suitable for use in the in vivo sequestration and elimination of
CC mercuric ions from gastrointestinal tracts of animals or humans exposed to
CC toxic metal ions such as mercury and/or cadmium. The molecules of the
CC invention are also useful in water treatment resins. The nucleic acid of
CC the invention is highly specific and binds divalent cation such as
CC mercury or cadmium with high affinity. The present amino acid sequence
CC cadmium/mercury ion binding chelon proteins of the invention. This
CC sequence is one of the heavy metal binding proteins termed chelons of the
invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 6

cc producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed. The nucleic acid encoding the chelon protein is useful for binding divalent centruic ions, to take up, sequester and concentrate the heavy metal ions cfrom contaminated soil, ground water, hydroponic solutions or irrigation contaminated soil, ground water, hydroponic solutions or irrigation contaminated environment waste streams or contaminated apueous medium contaminated environment waste streams or contaminated apueous medium contaminated environment waste streams or contaminated aqueous medium contaminated environment waste streams or contaminated aqueous medium contaminated environment waste streams or contaminated aqueous medium contaminated environment waste streams or contaminated aqueous medium contaminated environment waste streams or contaminated aqueous medium contaminated environment waste streams or contaminated aqueous medium contaminated environment waste streams or contaminated apueous medium contaminated environment waste streams or contaminated action of the invention are also useful in water treatment resins. The nucleic acid of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury in bindies of the invention and elimination of specific and binds divalent cation such as mercury in bindies cholen specific and binds divalent cation such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁

```
The present invention relates to a new non-naturally occurring CC recombinant DNA molecule comprising a sequence encoding a chelon protein CC which binds mercuric ions. The invention is useful for recombinantly CC producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector CC comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing CC the recombinant host cell under conditions, where DNA is expressed. The CC mercuric ions, to take up, sequester and concentrate the heavy metal ions CC from contaminated soil, ground water, hydroponic solutions or irrigation CC water of waste streams. The DNA of the invention, when immobilised onto a soild support, is useful for concentrating heavy metal ions from CC contaminated environment waste streams or contaminated aqueous medium CC including biological fluids. The pucleic acid, when recombinantly CC expressed in enteric bacteria (which are nontoxigenic and nonpathogenic), is suitable for use in the in vivo sequestration and elimination of concentrate ion from gastrointestinal tracts of animals or humans exposed to toxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 8

which binds mercuric ions. The invention is useful for recombinantly comparison of the producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed. The cultication contaminated soil, ground water, hydroponic solutions or irrigation contaminated soil, ground water, hydroponic solutions or irrigation contaminated environment waste streams or contaminated aqueous medial for contaminated environment waste streams or contaminated aqueous medial contaminated environment waste streams or contaminated aqueous medial conto a contaminated environment waste streams or contaminated aqueous medial conto including biological fluids. The nucleic acid, when recombinantly contaminated for use in the in vivo sequestration and elimination of mercuric ion from gastrointestinal tracts of animals or humans exposed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                            The present invention relates to a new non-naturally occurring recombinant DNA molecule comprising a sequence encoding a chelon protein which binds mercuric ions. The invention is useful for recombinantly producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed. The nucleic acid encoding the chelon protein is useful for binding divalent mercuric ions, to take up, sequester and concentrate the heavy metal ions from contaminated soil, ground water, hydroponic solutions or irrigation water of waste streams. The DNA of the invention, when immobilised onto a solid support, is useful for concentrating heavy metal ions from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mercuric ion; contaminated soil; ground water; hydroponic solution; irrigation water; waste stream; contaminated aqueous medium; biological fluid; gastrointestinal tract; chelon protein; enteric bacteria; toxic metal ion; mercury; cadmium; divalent cation; heavy metal binding protein; Merk.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      toxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino acid sequence represents one of a collection (ANU9753-ANU97560) of synthetic cadmium/mercury ion binding chelon proteins of the invention. This sequence is one of the heavy metal binding proteins termed chelons of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 2; Page 20; 42pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel non-naturally occurring recombinant DNA molecule encoding a chelon protein useful for binding divalent cation mercury from contaminated soil, water, aqueous medium including biological fluids.

The present invention relates to a new non-naturally occurring recombinant DNA molecule comprising a sequence encoding a chelon protein which binds mercuric ions. The invention is useful for recombinantly producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed. The nucleic acid encoding the chelon protein is useful for binding divalent mercuric ions, to take up, sequester and concentrate the heavy metal ions from contaminated soil, ground water, hydroponic solutions or irrigation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         including biological fluids. The nucleic acid, when recombinantly expressed in enteric bacteria (which are nontoxigenic and nonpathogenic), is suitable for use in the in vivo sequestration and elimination of mercuric ion from gastrointestinal tracts of animals or humans exposed to coxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino acid sequence represents the synthetic MerR chelon variant protein of the invention. Note: ABK52207 encodes only amino acids 1-107 of this of the invention. Note: ABK52207 encodes only amino acids 1-107 of this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mercuric ion; contaminated soil; ground water; hydroponic solution; irrigation water; waste stream; contaminated aqueous medium; biological fluid; gastrointestinal tract; chelon protein; enteric bacteria; toxic metal ion; mercury; cadmium; divalent cation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      conteminated environment waste streams or conteminated aqueous medium conteminated environment waste streams or contaminated aqueous medium conteminated environment waste streams or contaminated aqueous medium conteminated environment waste streams or contaminated aqueous medium contaminated aqueous medium conteminated environment waste streams or contaminated aqueous medium contemination of the such as the in vivo sequestration and elimination of contemeration from gastrointestinal tracts of animals or humans exposed to toxic metal ions such as mercury and/or cadmium. The mulcelles of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent carion such as content on the sequence of a collection (AAU9753-AAU97560) of synthetic cadmium/mercury ion binding chelon proteins of the invention. This sequence is one of the heavy metal binding proteins termed chelons of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
The present invention relates to a new non-naturally occurring recombinant DNA molecule comprising a sequence encoding a chelon protein which binds mercuric ions. The invention is useful for recombinantly producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC nucleic acid encoding the chelon protein is useful for binding divalent CC mercuric ions, to take up, sequester and concentrate the heavy metal ions CC from contaminated soil, ground watter, hydroponic solutions or irrigation CC water of waste streams. The DNA of the invention, when immobilised onto a CC solid support, is useful for concentrating heavy metal ions from CC contaminated environment waste streams or contaminated aqueous medium CC including biological fluids. The nucleic acid, when recombinantly CC expressed in enteric bacteria (which are nontoxigenic and nonpathogenic), CC is suitable for use in the in vivo sequestration and elimination of CC coxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as CC mercury or cadmium with high affinity. The present amino acid sequence CC cadmium/mercury ion binding chelon proteins of the invention. This sequence is one of the heavy metal binding proteins termed chelons of the

Anticalins can bind to a predetermined ligand with determinable affinity. Anticalins of fusions of anticalins, are used: (a) when immobilized, for capture of the conjugates of the conjugation of ligands (or their conjugates). Typically they bind to tissue- or tumor-specific fusions or conjugates). Typically they bind to tissue- or tumor-specific surface molecules and can be used for tumour imaging or directly for conjugates of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugation of the conjugati

                                                                                                                                                                                                                                                                                                                                                                                                                             Anticalins can bind to a predetermined ligand with determinable affinity. Anticalins or fusions of anticalins, are used: (a) when immobilized, for Anticalins or fusions of anticalins, are used: (a) when immobilized, for Separation; and (b) when labeled, for identification of ligands (or their fusions or conjugates). Typically they bind to tissue- or tumor-specific surface molecules and can be used for tumour imaging or directly for surface molecules and can be introduced into lipocalin polypeptides tumour therapy. Mutations can be introduced into lipocalin polypeptides more easily than into antibodies, since lipocalin polypeptides have only acid changes without significant effect on folding. Anticalins have high specific affinity, comparable with that for antibodies. This sequence specific affinity, comparable with that for antibodies. This sequence represents a fusion polypeptide used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes the preparation of anticalins from polypeptides of the lipocalin family by mutation of amino acids in the region of the peptide loops (at one end of the cylindrical 'leaflet' structure).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New anticalins produced by mutation of lipocalin family protein.
                                                                                                                                                                                                                                                                                                                                                                                            Sequence 254 AA;
Bilin binding-protein associated protein #2.

Bilin-binding protein; mutein; BBP; digoxigenin.
This invention describes novel polypeptides (I) that are muteins of bilin -binding protein (BBP), which can bind digoxigenin (Dig) or its conjugates, do not bind ouabain, testosterone or 4-mainofluorescein, and have an amino acid (aa) substitution at at least one of the positions 28, 31, 34-37, 58, 60, 69, 88, 90, 95, 97, 114, 116, 125 or 127. (I), or its fusion proteins, are used to bind, detect, determine, immobilize or separate Dig or its conjugates with proteins, nucleic acids, carbohydrates, other biological or synthetic macromolecules or low
                                                                                                                                                   New muteins of bilin-binding protein, useful for detecting digoxigenin being used as label in e.g. binding assays, are very selective for digoxigenin.
                                                                                                                                                                                                          WPI; 2001-071071/08.

CC used as a label. Compared with Dig-specific antibodies, (I) have a cc simpler structure and are easier to prepare. They have very high cc specificity for Dig, relative to other steroids, and fusion partners may be attached to either end without compromising their ability to bind cc ligand cc ligand system to state the compromising their ability to bind compromise the compared compromise of the compared compromise of the compared compromise of the compared compromise of the compared compromise of the compared compromise of the compared compared compromise of the compared compared compromise of the compared compared compromise of the compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared compared

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SOFTWARE: PatentIn version 3.0
SEQ ID NO 31
LENGTH: 24
TYPE: PRT
APPLICANT: Lohning, Corinna
TITLE OF INVENTION: No. 6753136el methods for displaying (poly) peptides/proteins on
TITLE OF INVENTION: particles via disulfide bonds
FILE REFERENCE: MORPHO/11
CURRENT APPLICATION NUMBER: US/09/809,517A
CURRENT FILING DATE: 2001-03-15
PRIOR APPLICATION NUMBER: EP 99114072.4
PRIOR PILING DATE: 1999-07-20
PRIOR APPLICATION NUMBER: EP 00103551.8
PRIOR PILING DATE: 2000-02-18
